FEEDBACK AND MEASUREMENT SYSTEMS. Brainwave analyzer, a 4-channel period measuring filter with preamp and adjustable upper and lower amplitude limits, $450. Accessories available include chart recorders, demodulators, power switching circuits. EMG with audio feedback & integrating meter, $250. Free catalog, Aquarius Electronics, Box 627P, Mendocino, Ca. 95460

Subject Index For Volume 10

Activity, as a stimulus attribute, effect on pupillary and HR responses during visual attention, 270
Affective responses, to pleasant and unpleasant olfactory stimuli, and rated intensity and parotid secretion, 231
Age, relationship to word association latency in children, and differences in left hemisphere EEG period, 154
Alpha, responses to mental tasks, 441, 471
Alpha blocking, latency, effects of time of stimulus presentation during cardiac cycle, 21
Analysis of variance, multivariate, theory and applications to psychophysiological data, 517
Anticipatory responses, HR, during avoidance vs passive receipt of shock, and effects of certainty of failure-to-avoid, 295
Anxiety, trait and overt-covert, correlation with resting frontalis muscle tension, 311
Arousal
  during cold pressor, alone and with motor task, brain damaged vs alcoholic vs control subjects, 166
  during foreperiod of reaction time task, relationship to reaction time, 177
  induced high vs low, visual evoked response amplitude differences, and fluid intelligence, 445
  prior to relevant vs irrelevant stimuli in evoked response enhancement during selective attention, evaluated as to whether it is necessary to enhancement, by varying stimulus predictability, 335
Associational processes (see also Cognitive factors and Awareness), in conditioning vs pseudoconditioning of GSR, 61
Associative reaction time, in children, related to age, contribution of left hemisphere EEG period differences, 154
Asymmetry of cognitive processes, 441
Attention
  and expectancy, effects on magnitude of response and habituation in skin conductance and HR, 100
  effects on visual and auditory evoked responses, and effects of stimulus intensity and individual differences, 392
  intramodal selective, and evoked response enhancement, evaluation of differential prior arousal as to whether it is necessary for the enhancement, by varying stimulus predictability, 335
  rapid eye movements during, correlation with REMs during sleep, and level of experience and/or CNS maturation, 488
Auditory evoked potentials, see Evoked responses
Auditory evoked responses, see Evoked responses
Autistic children, conditioning of evoked responses by coupling sound and light, vs normal children, 415
Autonomic conditioning, see Conditioning
Autonomic functions, during sleep in premature infants, and spontaneous skin potential responses, 478
Average evoked potentials, see Evoked responses
Average evoked responses, see Evoked responses
Aversion, electric shock, effects of avoidance behavior and expectancy on HR responses, 295
Aversiveness, autonomic and verbal indices, 328
Avoidance possibility, of shock, effects on HR, vs passive receipt, and effects of certainty of failure-to-avoid, 295
Avoidance response, in experimental shortening of REM period durations, 510
Awareness, of CS-UCS contingencies during classical conditioning of
  electrodermal response, 95, 108
  eyelid, 75, 91
  GSR, 82, 91, 108, 112
  plethysmograph digital volume-pulse change, 108
  vasomotor response, 108

Base levels
  HR, 218, 426
  skin conductance, 426
  skin resistance, 578
Basic skin conductance, see Base level, skin conductance
Bedouins, skin conductance and HR resting level differences between different races of similar ethnic origins, 426
Behavior, performance, effects of extended sleep, sleep deprivation, and shifts of accustomed sleep, 559
Biofeedback (see also Feedback)
  auditory, effects on conditioning of single motor units, 1
  research and technology, survey report of scientists' opinions about the regulation of their work, 536
  techniques and instrumentation, ethics committee report, 533

Body movements, during sleep
effects of continuous (24 hrs per day) tone-pulse noise, 369
reduction after sleep loss, 363
Brain damage, cutaneous vasomotor response to cold pressor and cold pressor plus motor task, vs control and alcoholic subjects, 166
Breathing depth, see Respiration amplitude
Breathing rate, see Respiration rate

Calibration, procedure for photoplethysmograph, and solution for light history effects, 67
Canonical correlation analysis, theory and applications to psychophysiological data, 517
Cardiac cycle, and timing of stimulus presentation, effects on alpha blocking latency, 21
Catecholamines
circulating concentrations during vigilance vs rest, relationship to performance and circulating concentrations of glucose and free fatty acids, 251
secretion to simple stimuli, high vs low ego strength subjects, 315
Central Nervous System (CNS) maturation, as manifested in waking and sleep REM patterns, 488
Cephalic vasomotor response, OR and DR, to neutral vs spider stimuli, phobic vs non-phobic subjects, 453
Children
autistic vs controls, conditioning of evoked responses, 415
effects of respiration rate and amplitude on HR and HR variability, vs adults, 377
psychotic vs controls, respiration sinus arrhythmia, 401
word association latency related to age, contribution of left hemisphere EEG period differences, 154
Choice, physiological responses—HR, eye movements, and alpha—differentiating it from other mental tasks, 471
Circadian rhythms
effects of timing and length of sleep on performance and mood, 559
effects on REM density, 545
Classical conditioning, see Conditioning
Cognitive factors, in classical conditioning, 75–122
Cold pressor, cutaneous vasomotor response, and effects of motor task during immersion, control vs brain damaged vs alcoholic subjects, 166
Committee report, ethics, recommendations regarding biofeedback techniques and instrumentation, 533
Complexity, as a stimulus attribute, effect on pupillary and HR responses during visual attention, 270
Computer hardware, digital encoding-decoding system, 616
Computer software
collection of EEG alpha under feedback control using time series analysis, 437
data preparation program, 613
on-line averaging of potentials prior to and following events not subject to experimental control, 184, 307
scored sleep data analysis, 612
Computer technology, survey of present status and application areas among psychophysiologists, 186
Concentration, physiological responses—HR, eye movements, and alpha—differentiating it from other mental tasks, 471
Conceptional age, of premature infants, and development of spontaneous skin potential responses during sleep, and relationship to other sleep variables, 478
Conditioned stimulus, pre-conditioning habituation, effects on conditioning of skin conductance responses, 583
Conditioning
classical
differential
electrodermal, 95
eyelid, 75, 91
GSR, 91
skin conductance, 145
discriminative, effects of skin conductance spontaneous fluctuations, 589
effects of awareness on GSR, plethysmograph digital volume-pulse change, vasomotor response, and electrodermal response, 108
effects of expectancy and attention on magnitude of response and habituation in skin conductance and HR, 100
electrodermal, magnitude vs recovery time as sensitive measures, and whether signaling reduces shock aversiveness, 328
GSR, and cognitive factors, 82, 87, 112
simple, effects of skin conductance spontaneous fluctuations, 589
skin conductance response, effects of prior habituation to conditioned stimulus, 583
vasomotor, in rabbits, dilation vs constriction, effects of thermal state at the time of conditioning, 238
evoked responses to coupling of sound and light, autistic children vs controls, 415
instrumental, salivation, effects of immediate vs delayed feedback, 501
operant, escape-avoidance, HR and EMG, and respiration, 8
REM period durations (shortened), by REM sleep interruption, 510

vs pseudoconditioning, GSR, differences as due to interstimulus interval variability, 61
Contingency learning, as necessity for classical conditioning of GSR, 82
Contingency position, in evaluation of cognitive control in classical conditioning, 108
Contingent Negative Variation (CNV)
amplitude, effects of availability of reaction time feedback, and relationship to reaction time and subjective reactions, 139
evaluation as possible mechanism producing the P300 enhancement of visual evoked responses during selective attention, 335
Cortical origin
of somatosensory evoked responses, latency criterion, 383
of very early auditory evoked response components, vs later components, 244

Damped sinusoid, and EEG delta activity during sleep, and REM cycle, 27
Data analysis
computer-compatible digital encoding-decoding system, 616
multivariate statistical analysis, 517
Data preparation, computer program, 613
Defensive responses (DR)
cephalic vasomotor constriction, 453
HR acceleration, 347, 453
skin conductance, 453
Delta, during sleep, as resembling a damped sinusoid pattern, and REM cycle, 27
Depression, vs control subjects, in skin resistance response, HR, respiration rate, and EEG activation-complexity, during rest and interrogation, 223
Development
and relationship between word association latency and age, effects of left hemisphere EEG period duration differences, 154
CNS maturation, as manifested in waking and sleep REM patterns, 488
Differential conditioning, see Conditioning
Directional fractionation, pupillary diameter and HR responses to visual stimuli, 270
Diurnal sleep, of night nurses, compared to nocturnal sleep when day-working—EEG, EOG, EMG, 36

Education, psychophysiology, nature and direction, survey results, 215
Ego strength, physiological, personality, perceptual and performance correlates, 315
Electrodermal recovery time, as an index of aversiveness, 328
Electrodermal response (see also GSR, Skin conductance, and Skin resistance), conditioned
cognitive factors, 95, 108
magnitude vs recovery time, as sensitive measures of discriminative conditioning, 328
Electroencephalogram (EEG)
alpha blocking latency, effects of time of stimulus presentation during cardiac cycle, 21
bilateral asymmetry of alpha during linguistic vs musical tasks, 441
during sleep
data analysis, computer software, 612
delta pattern, as resembling a damped sinusoid pattern, and REM cycle, 27
effects of extended sleep, sleep deprivation, and shifts of accustomed sleep, 559
habituation of evoked responses and K-complexes, 43
slow wave vs discontinuous, in premature infants, and spontaneous skin potential responses, 478
evoked responses, 43, 52, 125, 244, 307, 335, 383, 392, 415, 445
period analysis, depressed vs control subjects, differences in activation-complexity, during rest and interrogation, 223
period duration, left hemisphere, contribution to relationship of age to word association latency in children, 154
potentials antecedent to behavior, computer software for on-line averaging, 307
EEG feedback, alpha, computer software for collection of EEG alpha under feedback control using time series analysis, 437
Electromyogram (EMG) (see also Muscle tension)
conditioning, operant (escape-avoidance), and HR, and respiration, 8
conditioning of single motor units, effects of auditory feedback, 1
frontalis, resting level, correlation with trait anxiety, covert-overt anxiety, neuroticism, and external locus of control, 311
potentials antecedent to behavior, computer software for on-line averaging, 307
Electro-ocular artifacts, in evaluation of P3 component of auditory evoked response as a component of orienting response, 125
Encoding-decoding system, computer-compatible, 616
Environmental factors, in variation of HR by day of week, 218
Epidermis, hydration of, effects on skin potential levels and responses, 601
Ethics, committee report, recommendations regarding biofeedback techniques and instrumentation, 533
Ethnic origin, and skin conductance and HR resting levels, 426
Evaluation, as a stimulus attribute, effect on pupillary and HR responses during visual attention, 270
Event identification, peak identification in visual evoked potentials, reliability, 52
Event-related potentials, on-line averaging of, computer software, 184

Evoked responses
auditory
effects of attention, stimulus intensity, and individual differences, 392
P3 component as a component of the orienting response, effects of unpredictable stimuli, 125
very early components during different sleep stages and waking, of probable peripheral origin (as opposed to later centrally-mediated components), 244
conditioned, autistic vs normal children, 415
somatosensory, time-course of early components related to stimulus location, 383
visual
amplitude differences during induced high vs low arousal, and fluid intelligence, 445
effects of attention, stimulus intensity, and individual differences, 392
enhancement by selective attention, effects of predictability (and therefore prior arousal), 335
peak identification reliability, 52
Excitation, in skin conductance multiple response phenomena during differential conditioning, with random signal vs signal absent controls, 145
Expectancy
of a noxious stimulus, and attention, effects on magnitude of response and habituation, in skin conductance and HR, 100
of passive receipt of shock or failure-to-avoid shock, effects on HR responses, 295
Experimenter-race, effects on skin resistance base level and spontaneous activity and habituation, 578
Extended sleep, effects on performance and mood, 559
External locus of control, correlation with resting frontalis muscle tension, 311
Extroversion, correlation with ego strength and other personality traits and perceptual and performance variables, 315
Eye movements (see also Rapid eye movements)
differential response to different mental tasks, 471
REM density, effects of accumulation of prior sleep and prior waking, 545
Eyelid conditioning, cognitive factors, 75, 91

Factor analysis, theory and applications to psychophysiological data, 517
Fast Fourier Transform, in analysis of EEG delta during sleep as a damped sinusoid, 27
Feedback
EEG alpha, computer software for data collection, 437
immediate vs delayed, effects on voluntary control of salivation, 501
in voluntary control of HR, 260
of reaction time, availability of, effects on CNV amplitude, subjective reactions and reaction time performance, 139
Field dependence, correlation with ego strength and other personality traits and perceptual and performance variables, 315
Finger pulse, measured with photoplethysmograph, system calibration and solution for light history effects, 67
Fluid intelligence, and visual evoked response amplitude differences during induced high vs low arousal, 445
Forearm blood flow, and HR, during word association and an interview, patients vs controls, 571
Frontalis muscle tension, see Muscle tension
Full-term, vs premature infants, spontaneous skin potential responses during sleep, 478

Galvanic Skin Response (GSR)
base level and reactivity and habituation, effects of experimenter-race, 578
classical conditioning of, cognitive factors, 82, 87, 91, 100, 108, 112
conditioning vs pseudoconditioning, differences as due to interstimulus interval variability, 61
magnitude vs recovery time, as sensitive measures of discriminative conditioning, 328
GSR recovery time, see Electrodermal recovery time
Glucose, circulating concentration during vigilance vs rest, relationship to performance and circulating concentrations of catecholamines and free fatty acids, 251
Glucose tolerance, to simple stimuli, high vs low ego strength subjects, 315
Glycol solution, for low epidermal hydration, effects on skin potential levels and responses, 601

Habituation
alpha, 437
EEG, 43
GSR, 100, 578
HR, 100
defensive responses, 347
orienting responses, 43, 347
startle, 347
skin conductance response, 583
skin potential, 43
Heart rate (HR)
and forearm blood flow, during word association and an interview, patients vs controls, 571
base level (see also tonic levels)
changes, evaluation of possible influence on voluntary HR control, 260
race and ethnic differences, 426

variations by day of week, as reflection of cultural patterns of activity, 218
conditioning of
classical, effects of expectancy and attention on magnitude of response and habituation, 100
operant, escape-avoidance, and respiration and EMG activity, 8
defensive response, acceleration
to spider stimuli in phobic subjects, 453
to white noise and tone, and habituation, 347
during rest and interrogation, depressed vs control subjects, 223
effects of rate and depth of respiration, children vs adults, 377
effects of respiratory manipulations, respiration sinus arrhythmia in psychotic children vs controls, 401
measurement device for hand scoring of interbeat intervals, 614
orienting response
deceleration to neutral vs spider stimuli, phobic vs non-phobic subjects, 453
deceleration to white noise and tone, and habituation, 347
habituation during sleep, 43
response
effects of visual attention and specific stimulus attributes, 270
in aversive situation, with and without avoidance possibility—effects of avoidance behavior and expectancy, 295
to different mental tasks, 471
to simple and complex stimuli and during vigilance, with and without prior sleep deprivation, and relationship to reaction time, high vs low ego strength subjects, 315
tonic levels, effects of visual attention and specific stimulus attributes, 270
variability, effects of rate and depth of respiration, children vs adults, 377
voluntary control, optimizing motivational, feedback, and practice variables, and controlling for basal HR changes and respiratory influences, 260
Hydration, epidermal, effects on skin potential levels and responses, 601

Imagining, physiological responses—HR, eye movements, and alpha—differentiating it from mental tasks, 471
Impulsivity, correlation with ego strength and other personality traits and perceptual and performance variables, 315
Individual differences,
in evoked response intensity effects, and effects of attention, 392
in level of experience and/or CNS maturation, and REM patterns of waking and sleep, 488
in OR sensitivity to stimulus change, 465
Informational-cognitive control notion, reduction of shock aversiveness by signaling, evaluated using autonomic and verbal indices of aversiveness, 328
Inhibition, in skin conductance multiple response phenomena during differential conditioning, with random signal vs signal absent controls, 145
Instruction, in psychophysiology, nature and direction, survey results, 215
Instrumental autonomic conditioning, see Conditioning
Instrumentation
computer-compatible digital encoding-decoding system, 616
HR, measurement for hand scoring of interbeat intervals, 614
photoplethysmograph, system calibration and solution for light history effects, 67
Intelligence, fluid, and visual evoked response amplitude differences during induced high vs low arousal, 445
Intensity of unconditioned stimulus, see Stimulus intensity
Intensity ratings, of high and low signaled and unsignaled shocks, in determining whether signaling reduces aversiveness, 328
Interest, as a stimulus attribute, effect on pupillary and HR responses during visual attention, 270
Interrogation, vs rest, effects on skin resistance response, HR, respiration rate, and EEG activation-complexity, depressed vs control subjects, 223
Interstimulus interval
effects on habituation of OR during sleep, 43
in classical conditioning, effects on GSR multiple response phenomena, and cognitive processes, 112
variability, and the differences between conditioning and pseudoconditioning of GSR, 61
Interview, forearm blood flow and HR during, patients vs controls, 571
Intramodal selective attention, and evoked response enhancement, evaluation of differential prior arousal as to whether it is necessary for the enhancement, by varying stimulus predictability, 335
Intra-stressor stereotypy, pupillary constriction by some subjects and for some stimuli during visual attention, 270

K-complexes, habituation during sleep, effects of interstimulus intervals, 43

Latency of word association, in children, related to age, contribution of left hemisphere EEG period differences, 154
Lateral specialization, of alpha, linguistic vs musical tasks, 441
Law of initial values, in HR and pupillary diameter during visual attention, 270
Light history, effects on accuracy of photoplethysmograph recording, and solution, 67
Linguistic task, lateral specialization of alpha, and effects of degree of difficulty, 441

Masking tasks, effects on classical differential conditioning, 91, 95
Measurement, of heart rate, device for hand scoring of interbeat intervals, 614
Memory retrieval time, and relationship between age and word association latency in children, and effects of left hemisphere EEG period differences, 154
Mental tasks
  imagining, concentration, suppression, search, and choice—physiological differentiation, 471
  linguistic vs musical, alpha asymmetry, and effects of degree of difficulty, 441
  vigilance, vs rest, interrelationships among performance, circulating concentrations of adrenaline, noradrenaline, glucose, and free fatty acids, 251
Methodology
  computer technology, survey of present status and application areas among psychophysiologists, 186
  GSR, conditioning vs pseudoconditioning, and the use of CS– groups, 61
  multivariate statistical analysis, theory and applications to psychophysiological data, 517
  photoplethysmograph, system calibration and solution for light history effects, 67
  skin potential levels and responses, effects of epidermal hydration, 601
  sleepiness, quantification of, Stanford Sleepiness Scale, cross-validation, 431
  visual evoked potentials, peak identification reliability, 52
Mini-computer analysis, digital encoding-decoding system, 616
MMPI, in selection of "depressed" and control subjects, for comparison on physiological responses, during rest and interrogation, 223
Mood, effects of extended sleep, sleep deprivation, and shifts of accustomed sleep, 559
Motivation, optimized in selection of subjects for training of voluntary control of HR, 260
Motor unit training, effects of auditory feedback, 1
Movements, see Body movements or Eye movements
Multiple response phenomena, in classical conditioning
  GSR, cognitive factors, 112
  skin conductance
    differential conditioning, with random signal vs signal absent controls, inhibitory and excitatory influences, 145
    simple and discriminative conditioning, effects of spontaneous fluctuations, 589
Multiple stimulation, cold pressor and motor task, effects on cutaneous vasomotor response, control vs brain damaged vs alcoholic subjects, 166
Multiple stimulation intensities, in reducing the variability of visual evoked response peak identifications, 52
Multivariate statistical analysis, theory and applications to psychophysiological data, 517
Muscle potential, to simple stimuli, high vs low ego strength subjects, 315
Muscle tension, frontaiis, resting level, correlation with trait anxiety, covert-overt anxiety, neuroticism, and external locus of control, 311
Musical task, lateral specialization of alpha, 441

Naps, effects on major sleep periods, 36
Negative skin potential response, effects of epidermal hydration, 601
Neurolinguistics, bilateral asymmetry of alpha during linguistic vs musical tasks, 441
Neuroticism
  correlation with ego strength and other personality traits and perceptual and performance variables, 315
  correlation with resting frontalis muscle tension, 311
Newborns, premature vs full-term, spontaneous skin potential responses during sleep, 478
Night duty, effects on sleep patterns of nurses, 36
Nocturnal sleep, when day-working, compared to diurnal sleep of night nurses—EEG, EOG, EMG, 36
Non-REM sleep, computer software for analysis, 612
Nurses, effects of night duty on sleep patterns, 36

Odor responses, rated intensity and affective responses to pleasant and unpleasant stimuli, and parotid secretion, 231
Operant conditioning, see Conditioning
Operant control, HR, 260
Orienting response (OR)
  alpha, 437
  cephalic vasomotor response, vasodilation, 453
  EEG, 43, 125
  HR, 43, 347, 453
  rapid eye movement patterns during waking perception, 488

sensitivity to variation in stimulus conditions, 465
skin conductance, 453
skin potential, 43

Parotid secretion, to pleasant and unpleasant olfactory stimuli, and subjects' rated intensity and affective responses, 231
Peak distribution, in visual evoked potentials, reliability of peak identification, 52
Perception
perceptual speed, spatial visualization, spatial orientation—correlation with ego strength and other personality traits and performance variables, 315
rapid eye movements during, relationship to sleep REMs, and level of experience and/or CNS maturation, 488
Perceptual and associative processes, diffuse motor component, in autistic children, reflected in slow wave EEG response to coupling sound and light, 415
Performance
correlation with ego strength and other personality and perceptual variables, 315
effects of extended sleep, sleep deprivation, and shifts of accustomed sleep, 559
on vigilance task, relationship to circulating concentrations of catecholamines, glucose and free fatty acids, vs concentrations during rest, 251
Performance testing, to cross-validate Stanford Sleepiness Scale for quantification of sleepiness, 431
Periodicity, sleep-waking, effects on REM density, 545
Phasic events, of sleep, in premature infants, and spontaneous skin potential responses, and relationship to conceptional age and other sleep variables, 478
Phobic stimuli, physiological responses to, phobic vs non-phobic subjects (DR vs OR), 453
Photoplethysmograph, system calibration and solution for light history effects, 67
Pleasant vs unpleasant olfactory stimuli, parotid secretion, affective responses, and intensity ratings, 231
Pleasantness vs unpleasantness, as a stimulus attribute, effect on pupillary and HR responses during visual attention, 270
Plethysmograph, responses to cold pressor, and effects of motor task during immersion, control vs brain damaged vs alcoholic subjects, 166
Plethysmographic digital volume-pulse change, classical conditioning of, effects of awareness of CS-UCS contingency, 108
Poral closure, due to epidermal hydration, effects on skin potential levels and responses, 601
Positive skin potential response, effects of epidermal hydration, 601
Potency, as a stimulus attribute, effects on pupillary and HR responses during visual attention, 270
Practice, optimized in procedure for training of voluntary control of HR, 260
Preference for signaled or unsignaled shocks, by subjects, in determining whether signaling reduces aversiveness, 328
Premature infants, and spontaneous skin potential responses during sleep, relationship to conceptional age and other sleep variables, 478
Preparatory response theory, evaluation of, signaled vs unsignaled shocks, with electrodermal recovery time as index of aversiveness, 328
Pseudoconditioning, vs conditioning, GSR, differences as due to interstimulus interval variability, 61
Psychophysics, scaling tests for olfactory stimuli for intensity and degree of liking, and parotid secretion, 231
Psychophysiology
abstracts of the 1972 meetings of the Society for Psychophysiological Research, 191
education, nature and direction, survey results, 215
Psychosis, children, respiration sinus arrhythmia, vs normal controls, 401
Pulse rate, see Heart rate
Pulse volume, to simple stimuli, high vs low ego strength subjects, 315
Pupillary diameter, tonic levels and responses, effects of visual attention and specific stimulus attributes, 270

Quantitative dissociation, between pupillary and cardiac responses during visual attention, 270
Questionnaires, in evaluation of awareness of CS-UCS contingency during classical conditioning of GSR, 82

r^2, in analysis of EEG delta activity during sleep as resembling a damped sinusoid, and REM cycle, 27
Rabbits, vasomotor conditioning, effects of thermoregulation on dilation vs constriction as conditioned response, 238
Race differences
and skin conductance and HR resting levels, 426
in experimenters, effects on GSR base level, reactivity and habituation, 578
Random signal control, vs signal absent, effects on skin conductance multiple response phenomena during differential conditioning, excitatory vs inhibitory influences, 145

Rapid Eye Movement (REM) density, effects of accumulation of prior sleep and prior waking, 545
REM period, and EEG delta activity during sleep, 27
REM period duration, conditioned shortening by REM sleep interruption, 510
REM sleep, 488, 510, 545, 612
Rapid eye movements (see also Eye movements), waking-sleep interrelationships, and level of experience and/or CNS maturation, 488
Rating scale of sleepiness, Stanford Sleepiness Scale, cross-validation with performance on mental tasks and demonstration of changes in sleepiness with sleep loss, 431
Reaction time
  alpha blocking latency, effects of time of stimulus presentation during cardiac cycle, 21
  availability of feedback, effects on CNV amplitude, subjective reactions and reaction time performance, 139
  correlation with other performance variables and perceptual and personality variables, 315
  simple, relationship to skin conductance level and skin resistance response latency to foreperiod warning light, 177
  with and without prior sleep deprivation, relationship to physiological responses, high vs low ego strength groups, 315
Relational learning (see also Associational processes), in classical electrodermal conditioning, and masking tasks, 95
Respiration
  amplitude
    effects on HR and HR variability, children vs adults, 377
    to simple stimuli, high vs low ego strength subjects, 315
  during operant conditioning of HR and EMG, 8
  evaluation of possible influence on voluntary HR control, 260
  rate
    during rest and interrogation, depressed vs control subjects, 223
    effects on HR and HR variability, children vs adults, 377
    to simple stimuli, high vs low ego strength subjects, 315
  sinus arrhythmia, psychotic children vs controls, 401
Response-related potentials, antecedent to behavior, computer software for on-line averaging, 307
Rhythm, heart rate base level, variations by day of week, as reflection of cultural pattern of activity, 218
Salivation
  to pleasant and unpleasant olfactory stimuli, and subjects' rated intensity and affective responses, 231
  voluntary control, effects of immediate vs delayed feedback, 501
Schizophrenia, forearm blood flow and HR during work association and an interview, vs normal subjects, 571
Search, physiological responses—HR, eye movements, and alpha—differentiating it from other mental tasks, 471
Semantic differential ratings of visual stimuli, to determine stimulus attributes for correlation with pupillary and HR responses to the stimuli, 270
Sex differences, in parotid secretion flow rates, 231
Shifted sleep, effects on performance and mood, 559
Signaling shocks, whether aversiveness is reduced, as indexed by electrodermal recovery time, and subjective intensity ratings and preferences for signaled or unsignaled shocks, 328
Simple reaction time, see Reaction time
Situational stereotypy, pupillary dilation and HR deceleration during visual attention, 270
Skin conductance
  base level
    change, to simple and complex stimuli and during vigilance, with and without prior sleep deprivation, and relationship to reaction time, high vs low ego strength subjects, 315
    during reaction time foreperiod, relationship to simple reaction time, 177
    race and ethnic differences, 426
  conditioning of
    effects of expectancy and attention on magnitude of response and habituation, 100
    effects of prior CS–habituation, 583
    multiple response phenomena, with random signal vs signal absent controls, excitatory and inhibitory influences, 145
  response, palmar and dorsal, to neutral vs spider stimuli, phobic vs non-phobic subjects, 453
  spontaneous fluctuations, effects on simple and discriminative conditioning, 589
Skin potential
  base level, effects of epidermal hydration, 601
  OR, habituation during sleep, 43
  responses, effects of epidermal hydration, 601
  spontaneous responses in premature infants during sleep, and relationship to conceptional age and other sleep variables, 478
Skin resistance
  base level, effects of experimenter-race, 578

responses
during rest and interrogation, depressed vs control subjects, 223
habituation, effects of experimenter-race, 578
latency, to foreperiod warning light, relationship to simple reaction time, 177
spontaneous activity, effects of experimenter-race, 578
Sleep
accumulation, effects on REM density, 545
active vs quiet, in premature infants, and spontaneous skin potential responses, and relationship to conceptional age and other sleep variables, 478
data analysis, computer software, 612
diurnal vs nocturnal, and effects of naps, 36
effects of continuous (24 hrs/day) tone-pulse noise—electrophysiological and self-report data, 369
EEG delta activity as resembling a damped sinusoid, and REM cycle, 27
habituation of OR during, in HR, skin potential, and EEG, 43
reduction of body movements after sleep loss, whether due solely to increased slow wave sleep or reduction across stages, 363
REM, 488, 510, 545
very early auditory evoked response components, during different sleep stages and waking, of probable peripheral origin, 244
Sleep deprivation
and reduction in body movements during recovery sleep, whether due solely to increased slow wave sleep or reduction across stages, 363
effects on performance and mood, 559
effects on vigilance performance and physiological responses, high vs low ego strength groups, 315
Sleep EEG, see EEG
Sleep logs, self-report data on effects of continuous (24 hrs/day) tone-pulse noise on sleep, 369
Sleep loss, and demonstration of changes in sleepiness with Stanford Sleepiness Scale, 431
Sleep patterns, conditioned shortened REM period durations, by REM period interruption, 510
Sleep stages, effects of continuous (24 hrs/day) tone-pulse noise—electrophysiological and self-report data, 369
Sleep-wakefulness cycle, timing and length, effects on performance and mood, 559
Sleepiness, quantification of, Stanford Sleepiness Scale, cross-validation with performance on mental tasks and demonstration of changes in sleepiness with sleep loss, 431
Somatic coupling, HR and EMG and respiration, in escape-avoidance conditioning, 8
Somatosensory evoked response, see Evoked responses
Speech production, during experiment but not subject to experimental control, on-line averaging of event potentials prior to and following, computer software, 184
Spider phobics, skin conductance, HR, and cephalic vasomotor responses to spider vs neutral stimuli (DR and OR), 453
Spontaneous responses
GSR, 578
skin conductance, 589
skin potential, 478
Stage of sleep, distribution throughout sleep, night vs day, and effects of naps, 36
Startle reflex, HR, short-latency rapidly habituating acceleration, produced by rapid stimulus onsets, white noise, 347
Statistical analysis, computer programs
data preparation, 613
scored sleep data, 612
Stimulus change, and sensitivity of the OR, effects of individual differences, 465
Stimulus intensity
effects on auditory and visual evoked responses, and effects of attention and individual differences, 392
UCS, varied, effects on classical conditioning of electrodermal response, magnitude vs recovery time as sensitive indicators, 328
Stimulus intensity ratings, of pleasant and unpleasant olfactory stimuli, and affective responses and parotid secretion, 231
Stimulus location, related to time course of early components of somatosensory evoked response, 383
Stimulus predictability, varied, in evaluation of prior differential arousal as to whether it is necessary for visual evoked response enhancement during intramodal selective attention, 335
Stimulus timing, during cardiac cycle, effects on alpha blocking latency, 21
Stimulus unpredictability, effects on auditory evoked response, P3 component as component of orienting response, 125
Stress, cold pressor, cutaneous vasomotor response, and effects of motor task during immersion, control vs brain damaged vs alcoholic subjects, 166
Subjective responses, effects of availability of reaction time feedback, and relationships to CNV amplitude and reaction time, 139
Suppression, physiological responses—HR, eye movements, and alpha—differentiating it from other mental tasks, 471
Survey
biofeedback research and technology, scientists' opinions about the regulation of their work, 536

computer technology, its present status and application areas among psychophysiologists, 186

Technology, biofeedback
ethics committee recommendations, 533
survey report of scientists' opinions about the regulation of their work, 536
Temporal-parietal EEG alpha, bilateral asymmetry, linguistic vs musical tasks, 441
Thermoregulation, effects on dilation vs constriction as vasomotor conditioned response, in rabbits, 238
Time course of early components related to stimulus location, in somatosensory evoked responses, 383
Tone, vs white noise, in eliciting HR startle, orienting, and defensive responses, 347
Tone-pulse noise, 24 hrs/day, effects on sleep—electrophysiological and self-report data, 369
Tonic levels, pupillary diameter and HR, directional fractionation during visual attention, 270
Trait anxiety, correlation with ego strength and other personality traits and perceptual and performance variables, 315

Ultradian rhythm, and EEG delta activity during sleep, and REM cycle, 27
Unpredictable stimuli, and evoked responses, 125, 335

Vasomotor activity, measurement with photoplethysmograph, system calibration and solution for light history effects, 67
Vasomotor response
conditioned
classical, effects of awareness of CS-UCS contingency, 108
dilation vs constriction, effects of thermal state at the time of conditioning, in rabbits, 238
orienting and defensive responses, to neutral vs spider stimuli, phobic vs non-phobic subjects, 453
to cold pressor, and effects of motor task during immersion, control vs brain damaged vs alcoholic subjects, 166
Vigilance, vs rest, interrelationships among performance, circulating concentrations of adrenaline, noradrenaline, glucose, and free fatty acids, 251
Vigilance performance, and ego strength, 315
Visual attention, effects on pupillary diameter and HR (directional fractionation and situational stereotypy), and effects of specific stimulus attributes, 270
Visual evoked responses, see Evoked responses
Voluntary behavior, not subject to experimental control, on-line averaging of potentials prior to and following, computer software, 184
Voluntary control, with feedback
HR, 260
salivation, 501
single motor units, 1

Wakefulness, accumulation, effects on subsequent REM density during sleep, 545
White noise, vs tone, in eliciting HR startle, orienting, and defensive responses, 347
Word association
forearm blood flow and HR during, patients vs controls, 571
latency, in children, related to age, contribution of left hemisphere EEG period differences, 154

PSYCHOPHYSIOLOGY

Volume 10

January 1973–November 1973

Published Bimonthly by THE SOCIETY FOR PSYCHOPHYSIOLOGICAL RESEARCH
Detroit, Michigan 48207

COPYRIGHT © 1973 BY THE SOCIETY FOR PSYCHOPHYSIOLOGICAL RESEARCH

Contents of Volume 10

No. 1, January 1973

Auditory Feedback and Conditioning of the Single Motor Unit. BRUCE E. LEIBRECHT, ANDREE J. LLOYD, AND SADIE POUNDER 1

The Relation Between Heart Rate and Electromyographic Activity in a Discriminated Escape-Avoidance Paradigm. MICHAEL J. COHEN 8

Latency of Alpha Blocking as a Function of Photic Stimulation During the Cardiac Cycle. STANLEY NOVAK, JAIME DIAZ, AND STUART LEINWAND .. 21

EEG Delta Activity During Human Sleep as a Damped Ultradian Rhythm. ARDIE LUBIN, CYRIL NUTE, PAUL NAITOH, AND WILLIAM B. MARTIN 27

Effects of Night Duty on Sleep Patterns of Nurses. GREER BRYDEN AND T. L. HOLDSTOCK 36

Habituation During Sleep. HUGH FIRTH 43

Methodology

Peak Identification in Visual Evoked Potentials. ROBERT A. HALL, MAURICE RAPPAPORT, H. KENNETH HOPKINS, AND RALPH B. GRIFFIN .. 52

On the Distinction Between Conditioning and Pseudoconditioning. KENNETH R. BURSTEIN 61

Instrumentation

Photoplethysmography: System Calibration and Light History Effects. ROBERT A. NOVELLY, PETER J. PERONA, AND ALBERT F. AX 67

Special Publication: Classical Conditioning and the Cognitive Processes: A Symposium 74

Cognitive Factors in Eyelid Conditioning. DAVID A. GRANT 75

Can Classical Conditioning Occur Without Contingency Learning? A Review and Evaluation of the Evidence. MICHAEL E. DAWSON 82

Is There Classical Conditioning Without Cognitive Expectancy? IRWIN J. MANDEL AND WAGNER H. BRIDGER 87

The Role of Awareness in Differential Conditioning. LEONARD E. ROSS AND MICHAEL N. NELSON 91

Unexpected Effects of Masking: Differential EDR Conditioning Without Relational Learning. PAUL E. BAER AND MARCUS J. FUHRER 95

Expectancy and Magnitude of Reaction to a Noxious UCS. SEYMOUR EPSTEIN 100

Some Limits on the Cognitive Control of Conditioned Autonomic Behavior. JOHN J. FUREDY 108

Cognitive Processes and the Multiple Response Phenomenon. RUSSELL A. LOCKHART 112

Cognitive Factors and Conditioning: An Overview. WILLIAM W. GRINGS 119

Cognitive Factors and Conditioning: Comments on Papers. JOHN A. STERN 121

Announcements 123

Author Index 124

No. 2, March 1973

Auditory Evoked Responses to Unpredictable Stimuli. WALTON T. ROTH . . . 125
Subjective and Response-Related Determinants of CNV Amplitude. CHARLES S. REBERT AND KATHLEEN G. SPERRY 139
Differential SCR Conditioning With Two Control Baselines: Random Signal and Signal Absent. WILLIAM F. PROKASY, WILLIAM C. WILLIAMS, KAROL L. KUMPFER, WILLIAM YU-MING LEE, AND WILLIAM R. JENSON 145
Word Association Latency in Normal Children During Development and the Relation of Brain Electrical Activity. WALTER W. SURWILLO 154
Autonomic Arousal in Normal, Alcoholic, and Brain-Damaged Subjects as Measured by the Plethysmograph Response to Cold Pressure Stimulation. WILLIAM LOVALLO, OSCAR A. PARSONS, AND FRANK A. HOLLOWAY 166
The Latency of the Skin Resistance Response and Reaction Time. MICHAEL P. COWLES 177
Computer Software 184
The Present Status of Computer Technology and Its Application Areas Among Psychophysiologists With Five Year Projections. S DAVID KAHN AND EMMETT B. SWINT, JR. 186
Abstracts
Abstracts of Papers Presented at the Twelfth Annual Meeting of the Society for Psychophysiological Research 191
Brief Reports
The Educational Process in Psychophysiology. HAROLD J. JOHNSON AND JERRY R. MAY 215
Basal Heart Rate Variations by Day of Week. EDWARD J. MALMSTROM 218
Author Index 221

No. 3, May 1973

Psychophysiological Discriminants of Reactive Depression. LAWRENCE T. MC CARRON 223
Human Parotid Secretion in Response to Pleasant and Unpleasant Odorants. ROSE MARIE PANGBORN AND BARBRO BERGGREN 231
Conditioned Vasomotor Response: Thermoregulatory Effects. WARREN H. TEICHNER, JACQUELYN BEALS, AND VINCENT GIAMBALVO 238
Brief Latency Click-Evoked Potentials During Waking and Sleep in Man. MARCO AMADEO AND CHARLES SHAGASS 244
Interrelationships Among Performance, Circulating Concentrations of Adrenaline, Noradrenaline, Glucose, and the Free Fatty Acids in Men Performing a Monitoring Task. JAMES F. O'HANLON AND STEVEN M. HORVATH 251
Large Magnitude Voluntary Heart Rate Changes. DAVID T. WELLS 260
Pupillary and Cardiac Activity During Visual Attention. WILLIAM L. LIBBY, JR., BEATRICE C. LACEY, AND JOHN I. LACEY 270
Cardiac Responses in Aversive Situation With and Without Avoidance Possibility. GERARD MALCUIT 295
Computer Software
On-Line Averaging of Potentials Antecedent to Voluntary Behavior. LENORE K. MORRELL 307

Brief Report
Frontalis Muscle Tension and Personality. ROBERT P. SMITH, JR. 311
Announcements 313
Author Index 314

No. 4, JULY 1973

Presidential Address, 1972
Personality, Psychophysiology, and Performance. ROBERT ROESSLER 315
Effects of Varying Signaling and Intensity of Shock on an Unconfounded and Novel Electrodermal Autonomic Index in a Variable and Long-Interval Classical Trace Conditioning Paradigm. JOHN J. FUREDY AND STANLEY GINSBERG 328
The Effect of Predictability on Evoked Response Enhancement in Intramodal Selective Attention. JAMES C. CORBY AND BERT S. KOPELL 335
Differential Heart Rate Changes to Equally Intense White Noise and Tone. FRANCES K. GRAHAM AND DIANA AREZZO SLABY 347
Body Movements During Sleep After Sleep Loss. P. NAITOH, A. MUZET, L. C. JOHNSON, AND J. MOSES 363
Effects of Long Term Exposure to Tone Pulse Noise on Human Sleep. RICHARD E. TOWNSEND, LAVERNE C. JOHNSON, AND ALAIN MUZET. 369
Respiratory-Cardiac Relationships in Children. L. ALAN SROUFE AND DAVID MORRIS 377
Averaged Evoked Responses to Tapping: A One-Subject Scalp Study of Large Signals. HILTON STOWELL 383
The Effects of Attention, Stimulus Intensity, and Individual Differences on the Average Evoked Response. GAIL SCHECHTER AND MONTE BUCHSBAUM 392
Respiration Sinus Arrhythmia in Psychotic Children. LEONARD R. PIGGOTT, ALBERT F. AX, JACQUELINE L. BAMFORD, AND JOANNE M. FETZNER. 401
Comparative Study of Conditioning of Average Evoked Responses by Coupling Sound and Light in Normal and Autistic Children. G. LELORD, F. LAFFONT, P. JUSSEAUME, AND J. L. STEPHANT. 415
Psychophysiological Baselines as a Function of Race and Ethnic Origin. ISRAEL LIEBLICH, SOL KUGELMASS, AND GERSHON BEN-SHAKHAR. 426
Methodology
Quantification of Sleepiness: A New Approach. E. HODDES, V. ZARCONE, H. SMYTHE, R. PHILLIPS, AND W. C. DEMENT 431
Computer Software
ALFIE: Collection of EEG Alpha Under Feedback Control Using Time Series Analysis. DAVID GOODMAN. 437
Brief Report
Scaled Lateralization of Alpha Activity During Linguistic and Musical Tasks. GEORGE MC KEE, BRIAN HUMPHREY, AND DALE W. MC ADAM. 441
Author Index 444

No. 5, SEPTEMBER 1973

Evoked Potential Amplitude Change Related to Intelligence and Arousal. DAVID WM. SHUCARD AND JOHN L. HORN 445
Orienting and Defensive Responses to Visual Stimuli. ROBERT D. HARE. . . . 453

Change in Stimulus Conditions and the Orienting Response. J. G. O'GORMAN. 465
Physiological Correlates of Mental Activity: Eye Movements, Alpha, and Heart Rate During Imagining, Suppression, Concentration, Search, and Choice. ERIC KLINGER, KENNETH C. GREGOIRE, AND STEVEN G. BARTA 471
Spontaneous Skin Potential Responses in Sleeping Infants Between 24 and 41 Weeks of Conceptional Age. LILYA CURZI-DASCALOVA, NICOLE PAJOT, AND COLETTE DREYFUS-BRISAC 478
Correlation Between Measures of the Rapid Eye Movements of Wakefulness and Sleep. A. DE LA PEÑA, V. ZARCONE, AND W. C. DEMENT. 488
The Effects of Immediate Feedback Upon Voluntary Control of Salivary Rate. DAVID T. WELLS, BEN W. FEATHER, AND MARY W. HEADRICK ... 501
REM Sleep Interruption: Experimental Shortening of REM Period Duration HARRY FISS AND STEVEN J. ELLMAN 510
Methodology
Multivariate Statistical Analysis. LAWRENCE F. VAN EGEREN 517
Committee Report
Recommendations of Ethics Committee Regarding Biofeedback Techniques and Instrumentation: Issues of Public and Professional Concern. DAVID SHAPIRO 533
Survey Report
A Case Study of Scientists' Opinions about the Regulations of their Work: Opinions of the Members of the Society for Psychophysiological Research about the Regulation of Biofeedback Research and Technology. H. STEPHEN LEFF 536
Author Index 544

No. 6, NOVEMBER 1973

Relationship of Rapid Eye Movement Density to the Prior Accumulation of Sleep and Wakefulness. EUGENE ASERINSKY 545
Performance and Mood Following Variations in the Length and Timing of Sleep. JOHN M. TAUB AND RALPH J. BERGER 559
Cardiovascular Response During a Word Association Test and an Interview. REDFORD B. WILLIAMS, JR., BERNARD L. FRANKEL, J. CHRISTIAN GILLIN, AND JAMES L. WEISS 571
Race Differences and Experimenter Race Effect in Galvanic Skin Response. LESLIE E. FISHER AND HARRY KOTSES 578
Effects of Prior CS Presentations on Classical Conditioning of the Skin Conductance Response. AVRUM I. SILVER 583
The Relationship Between Spontaneous and Stimulus-Correlated Electrodermal Responses in Simple and Discriminative Conditioning Paradigms. ARNE ÖHMAN AND GUNILLA BOHLIN 589
Methodology
Effects of Epidermal Hydration on Skin Potential Responses and Levels. DON C. FOWLES AND ROBERT ROSENBERRY 601
Computer Software 612
Instrumentation
A Simple and Accurate Measurement Device for Hand Scoring of

Interbeat Intervals of the Electrocardiogram. RUSSELL A. LOCKHART 614
A Computer Compatible Digital Encoding-Decoding System. DAVID I. MOSTOFSKY, STEPHEN A. COHEN, AND JAMES BABISH 616
Announcements 624
